WITH MORE THAN 100 METALWORKING PRODUCTS FOR BUILDERS

Commercial Roofracks

This month we feature our heavy duty commercial roofracks. These have been designed for commercial applications such as supporting glass frails on vans, and have features which suit builder applications.

The Roofbar extrusion is owned by Metalcraft Engineering, and allows for insertion of bolts to the top and bottom of the roofbar providing connection of a range of fittings for securing ladders, storage bins and the like.

The top of the roofbar also has a fitted polymer bearing surface which is soft, hardwearing, and non-marking.

A range of brackets and gutter clamps are available for all common vehicles. If you need a strong roofrack solution for your vehicles please call us.

We are a metalworking engineering business with 20 staff and 20 years experience and our core competencies include :

- Fences and gates
- Internal and external balustrades
- Internal and external handrails
- Aluminium safety walkways and roof access
- Signs and plinths
- Architectural metalwork
- Ornamental metalwork

Please call us for your next metalworking project.

Windbreaks

Metalcraft Engineering designs, fabricates and installs windbreaks for discerning customers. Most of our windbreaks are fabricated in stainless, aluminium or steel with infill panels of toughened, laminated and sometimes opaque or textured glass.

We've designed and built most styles of windbreak, and have the skills and experience to complete jobs on-time and on-budget, and to a very high quality.

Ian's thoughts

Most Canterbury business owners would agree that we've had more enjoyable years than the last twelve months. However, the onslaught of the mighty All Blacks, the new colours and growth of spring, and the warmth in the afternoon breeze all bring a more positive outlook to my life. I hope you're the same.

Business for us has been ok for the last month, and we are starting to see our annual growth in metalworking jobs as spring drives change. I hope the quake on Sunday night doesn't slow this down.

Please include us in your next metalwork solution. We are keen to help and we are good at what we do.

If you need metalworking services please give us a try.

Contact me or any one of the team anytime on 03-3603373 (option 2) or ian@metalcraft.co.nz
