WITH MORE THAN 100 METALWORKING PRODUCTS FOR BUILDERS

Quality Metalworking

This month we feature an architectural deck support which we designed, fabricated and installed at a property in Akaroa.

The post is steel with a lazer-cut pattern and hot dip galvanised. Metalcraft designed, fabricated and installed the post which greatly adds to the aesthetics and street appeal of the property, as was the intention of the owners.

We also designed, fabricated and installed the stairs and handrails, which like the post, have an architectural look to them.

As a metalworking engineering business with 20 staff and 20 years experience we enjoy taking on projects which include an element of design and flair.

The core capabilities of Metalcraft Engineering include :

- Fences and gates
- Internal and external balustrades
- Internal and external handrails
- Aluminium safety walkways and roof access
- Signs and plinths
- Architectural metalwork
- Ornamental metalwork

Please consider Metalcraft Engineering for any architectural metalwork needs you and your clients may have.

Roof walkways and access systems

Metalcraft Engineering has been designing, fabricating, installing and servicing roof access and walkway systems for many years. All of these solutions are design and build as they are tailor made for the building and to access particular rooftop hardware.

We've also installed roof walkway systems for prisons where the needs and somewhat different.....

We utilise walkway system componentry from the major component suppliers and utilise other aluminium products (including our own extrusions from our 18 aluminium dies) to create high quality and cost effective aluminium walkway and roof access solutions for our clients.

As Christchurch rebuilds we believe that our ability to fabricate very lightweight and functional roof access systems will be attractive to building owners and architects.

Next time you have a need for safety roof walkways and access ladders, please give us the opportunity to show you and your clients how good we can be.

Ians thoughts

Although frustratingly slow for most business owners, the gradual process of the rebuild of Christchurch is happening. When I look back on where we were a few months ago the city plan was being opened for submissions, the announcements about the future of land in the city had not been announced, and everyone was uncertain. Although there is much more progress needed, at least these three basics are progressing. That can only be good for our city and its businesses.

Please include us in your next metalworking solution. We are keen to help and we are good at what we do.

If you need metalworking services please give us a try.
