### WITH A RANGE OF PRODUCTS TO ASSIST FENCING CONTRACTORS

## Riccarton Bush Fence and Gates

Welcome to the second Fencing newsletter from Metalcraft Engineering. We publish Newsletters highlighting exciting fencing projects we've completed and advising the industry of products and offerings we have available.

This month we're featuring the Riccarton Bush fencing project which we completed last year. The fence panels are 3M x 1.8M with vertical 16mm steel bars drilled and welded into position. There's two sets of gates at 5M and 4M wide. All steelwork is to a painted finish as requested by the customer. For this project we fabricated the fence units and provided all installation work.

The job was challenging due to the undulating ground surface, and the high number of beautiful old trees which needed to be protected.

At Metalcraft we help fencing contractors with :

- Supply of metalworking products – fence posts, gates, fence panels etc
- Additional metalwork manufacturing capacity when the usual supply chain cannot deliver
- Assistance with metalworking products which fall outside of what most fencing contractors supply – architectural steelwork, structural steelwork, ornamental steelwork, highly tailored metalwork etc

## Pool Fences and Gates

This month we are featuring our metal fabricated pool fences and gates.

We are not a supplier of pre-fabricated pool fences and gates. We tailor-make pool fence and gate solutions for discerning buyers.

Pool fences we manufacture and install often have glass panels or sections, combined with steel, aluminium and/or stainless steel posts and panels.

During the next few months we expect to see increased demand for pool fencing as residents begin remedial work for earthquake damage, and also look towards summer.

If you introduce us to your client we can either work for you, or direct for the client – your choice. Once introduced we will not compete with you.

Please call us with your next pool fence and gate opportunity.

## Ian's thoughts

I hope you, your staff and families, and your business were not too greatly affected by the recent quakes, and that the government announcements were positive for you.

At Metalcraft we are continuing to be proactive to grow our business and provide our staff with some certainty in their careers. As our city rebuilds we know we will grow our business so much effort is being focused on putting systems in place to allow and support the growth.

Over the last 20 years we've been fortunate to install many fences and gates throughout Canterbury. The old saying "the more you do, the more you learn" certainly applies for us as we avoid many design and project management pitfalls. This leads to a professional service to our clients and business partners. We also take on the hard jobs.

If you need metalworking services please give us a try.
