### A RANGE OF SAFETY ROOF WALKWAY & ACCESS LADDER SOLUTIONS

#### Quality Metalworking

These newsletters usually focus on our aluminium roof access and walkway systems, but this month we feature an architectural deck support which we designed, fabricated and installed at a property in Akaroa.

The post is steel with a lazer-cut pattern and hot dip galvanised. Metalcraft designed, fabricated and installed the post which greatly adds to the aesthetics and street appeal of the property, as was the intention of the owners.

We also designed, fabricated and installed the stairs and handrails, which like the post, have an architectural look to them.

As a metalworking engineering business with 20 staff and 20 years experience we enjoy taking on projects which include an element of design and flair.

The core capabilities of Metalcraft Engineering include :

- Aluminium safety roof access and walkway systems
- Fences and gates
- Internal and external balustrades and handrails
- Signs and plinths
- Architectural metalwork
- Ornamental metalwork

Please consider Metalcraft Engineering for any architectural metalwork needs you and your clients may have.

## Safety roof access and walkway systems

This month we've listed the top 10 reasons why we believe we are the logical choice for supply of quality aluminium roof access and walkway systems for the Canterbury rebuild :

1. We have been in business for 20 years and are reputable
2. We have established our business as a specialist in aluminium roof access and walkway systems
3. We have strong relationships with both of the major aluminium roof access and walkway componentry suppliers
4. We own 15 of our own aluminium dies which provide options and additions to the main aluminium suites, and enable us to create unique and cost effective solutions for our clients
5. We are very good designers, with 3D CAD capability
6. We have highly skilled fabricators and quality factory manufacturing equipment such as a linear CNC
7. We understand site work and are good at it
8. Lightweight aluminium roof access and walkway systems make sense for the new Christchurch commercial buildings due to the benefits of light weight, low maintenance, and safety.
9. Our sales and design team are very flexible and will work with yourselves and others to pull the right solution together for your client
10. We are very keen!

## Bryns thoughts

Most Canterbury business owners would agree that we've had more enjoyable years than the last twelve months. However, the onslaught of the mighty All Blacks, the new colours and growth of spring, and the warmth in the afternoon breeze all bring a more positive outlook to my life. I hope you're the same.

Business for us has been ok for the last month, and we are starting to see our annual growth in metalworking jobs as spring drives change. I hope the quake on Sunday night doesn't slow this down.

Please include us in your next metalwork solution. We are keen to help and we are good at what we do.

If you need metalworking services please give us a try.
