A RANGE OF SAFETY ROOF WALKWAY & ACCESS LADDER SOLUTIONS

Jelly Park Aquatic Centre

Welcome to the third Safety Roof Walkway newsletter from Metalcraft Engineering Co Ltd.

This month we feature an aluminium walkway system which we designed and manufactured at our Christchurch facility, and installed at the Jelly Park Aquatic Centre.

The roof access system was designed to allow easy and safe access to roof mounted hardware, such as airconditioning units and piping. Long lengths of tread and handrails were required due to the size of the building.

The roof access was installed immediately following the roofing being finished. This meant that all tradespeople who needed roof access for the installation and commissioning of their equipment had safe and easy access. Additionally any potential damage to the roofing was minimised.

This project was completed on-time, on-budget, and the customer was very pleased.

We utilise walkway system componentry from the major component suppliers and utilise other aluminium products (including our own extrusions from our 18 aluminium dies) to create very high quality and cost effective aluminium walkway and roof access solutions for our clients.

Next time you have a need for Safety Roof Walkways and Access Ladders, please give us the opportunity to show you and your clients how good we can be.

10 benefits of Aluminium walkways for the rebuild of Christchurch!

1. Very lightweight, reducing the need for strengthening in the roof system
2. A range of tread and handrail options are available
3. Designed, manufactured and installed by Cantabrians!
4. We have a competent design team to assist with ideas and options at the design phase
5. Aluminium requires little if any maintenance
6. Our track record is for being easy to work with, and completing jobs professionally on-time and on-budget
7. If any issues arise they can be fixed here in Christchurch by Cantabrians
8. The Christchurch rebuild will require that our buildings are built to stringent safety standards = Aluminium roof access systems!
9. Aluminium roof access and walkway systems look good!
10. Maintenance staff like using them as they're safe!

Bryns thoughts

Since our last newsletter our city has endured many small quakes, and a snowstorm followed by the melt and associated flooding. It doesn't seem fair that we got the icing on the quake!

We have been fortunate to secure some orders which will help us through the winter period and are hopeful of the rebuild program helping us attain manhours for our 20 staff over the summer months and years to come. We continue to try hard with a range of marketing initiatives and long hours!

Please include us in your next roof walkway and access solution. We are keen to help and we are good at what we do.
