## RANGE

The Glass Racking Company provides a range of large covered glass transportation trailers. Our large covered glass trailers have curtain sides which conceal the glass load and allow easy access to the external glass racks from the sides of the trailer.

The external racks include a pocket between the front of the trailer and the rear trailer wheels sized to suit stock sheets. There is a smaller rack over the wheel area.

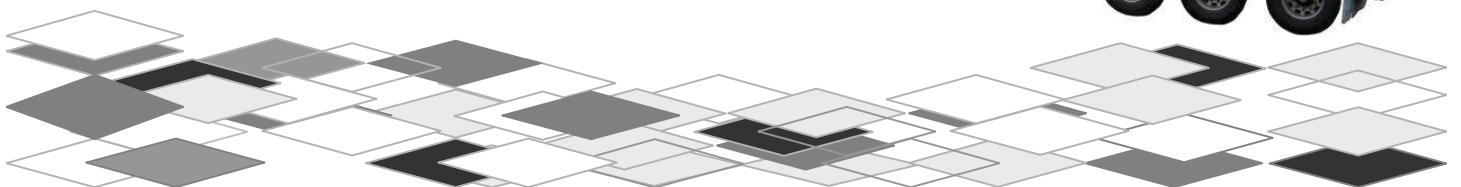

The external racks have a usable ledge width of 250mm. The height and length are easily configurable to suit the users needs.

The roof is a glidetop roof allowing the canvas top to be manually pulled to the front of the trailer to allow loading of glass (usually packs) into the internal racks of the trailer from above.

The rear of the trailer has container style doors with steps and a slide-out 3M long ramp to allow easy access to the internal racks and load. The low-loader style trailers have a floor height of only 720mm which increases the storage capacity, makes the process of loading and unloading easier, and helps on-road vehicle handling.

## FEATURES

The Glass Racking Company large covered glass trailers use our sprung glass retention poles for securing the glass on the external racks. The internal racks use our strap pole glass retention poles. Both have blue sliding non-marking blocks which hold the load secure, with optional yellow scissor clamps on the external sprung poles.

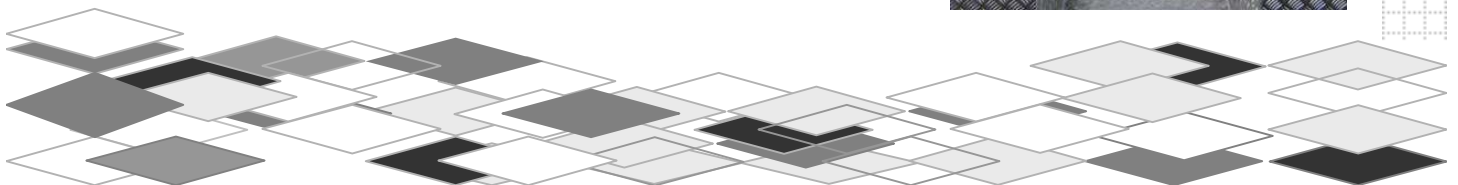

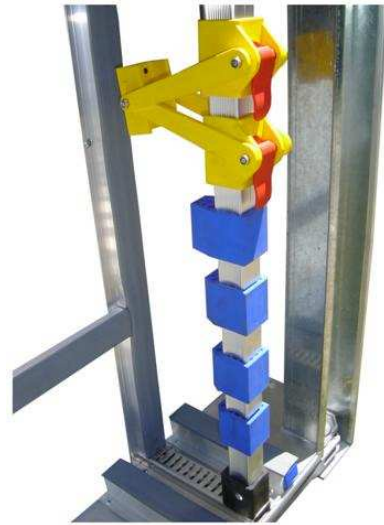

The internal deck is a hardwood plywood deck with inlaid slotted base for location of the glass retaining poles.

The neck of the trailer can be used for storage and securing of Transport Trolleys and other glass industry related product.

The canvas curtains on the trailers provides for low cost and effective advertising and branding.

The design and build capability of The Glass Racking Company means that solutions can be configured to meet the needs of each user and vehicle.

The Glass Racking Company provides the large covered glass trailers as a turnkey solution ready to use.

## BENEFITS

- These large covered glass trailers provide an option for those customers wanting a truck and trailer solution for long haul transportation of the increasing volumes and weight of flat glass and DGUs.
- Increasingly vehicle fleets are having a range of truck and trailer designs to provide options for locations, loads, and customer site access
- Strong construction and componentry suited to the transportation of glass
- A proven glass retention system, being the same as used on our vans, utes and other trucks.
- Options for sizing and also for weight carrying.
- Wonderful signage and branding opportunities!
