RANGE

The Glass Racking Company provides a range of small covered glass transportation trailers. Our small covered glass trailers have curtain sides which conceal the glass load and allow easy access to the external glass racks from the sides of the trailer.

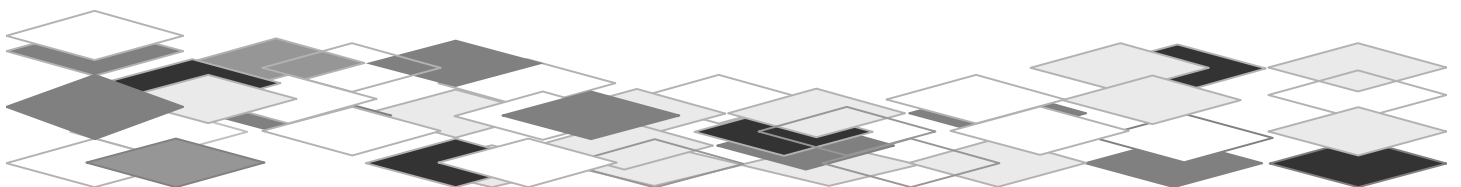

The external racks are typically 3M to 3.5M long, 1.2M to 1.5M tall and have a usable ledge width of 120mm. The height and length are easily configurable to suit the users needs.

Modern dual axle trailer systems have options for manual and electric brakes, for either single or double braked axles, and have optional in-vehicle controllers. This means that the trailer can be configured to suit the glass load dimensions and weight, the tow vehicle specifications, and road user requirements.

The rear of the trailer can be either container style doors, a fold-down ramp to allow ease of access for loading the internals, or a curtain.

The fold down ramp can be used to winch a transport trolley into the inside of the trailer for storage and transportation of additional glass to site. Transport trolleys allow forklift and crane lifting of their glass load.

The angled front of the trailer allows for additional storage of tools and equipment.

FEATURES

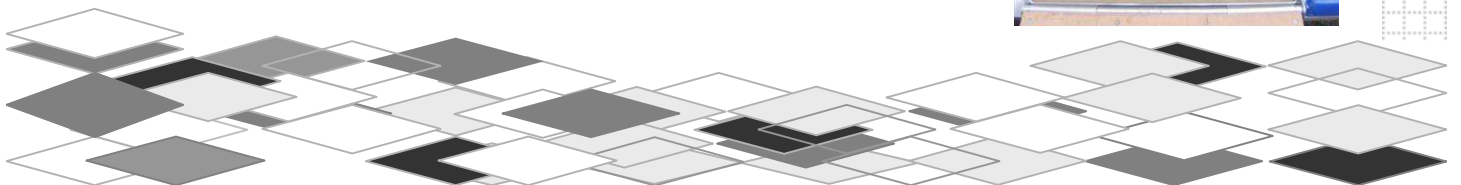

The Glass Racking Company small covered glass trailers have a hard top of fibreglass panel which is weatherproof, durable for longevity, and adds structural strength to the trailer.

The internal deck is hardwood plywood. For trailers with internal glass racks in addition to the external glass racks, the hardwood plywood deck has inlayed slotted base for location of the glass retaining poles.

Small covered glass trailers are typically designed with minimal width to make them easy to tow and position at sites. Typical overall width of the trailer is 1800mm with the wheels are guards protruding from the 1200mm frame.

The Glass Racking Company provides the small covered glass trailers as a turnkey solution ready to use.

The design and build capability of The Glass Racking Company means that solutions can be configured to meet the needs of each user.

BENEFITS

- These small covered glass trailers provide an option for those customers wanting to move away from traditional vans for transportation of the increasing volumes and weight of flat glass and DGUs.
- These small trailers are becoming popular with those glaziers and glass companies wanting to transport heavyweight glass, such as that used for ballustrading and shower doors.
- Strong construction and componentry suited to the transportation of glass
- A proven glass retention system, being the same as used on our trucks, vans, and utes.
- Options for sizing and also for weight carrying.
- Wonderful signage and branding opportunities!
