Key Features :

The racks come in various lengths to allow for configuration specific to your vehicle and needs.

Contact points for the windscreen are protected with polymers and foam to reduce damage to the windscreens. Construction is aluminium for lightweight, long life and durability.

The rack easily disassembles into a small flat unit for easy storage.

The cams are offset so that they can be rotated to tighten against the windscreens to secure them, and loosened for windscreen removal.

Individual poles can be removed to bulk stack damaged windscreens for transportation back to the factory rubbish bin.

The windscreens edge sits on polymer covered aluminium raised base blocks to protect the windscreen and allow the user access for lifting.

The Glass Racking Company windscreen rack provides a professional image to your customers as they can see that you are using a purpose built system for storing and securing windscreens.

The Glass Racking Company windscreen rack has been designed in conjunction with glaziers and windscreen installers

SAVE SPACE AND PROTECT YOUR WINDSCREENS

The perfect solution for carrying windscreens between your factory and your customers

Contact us today to discuss your transportation requirements.
