FEATURES

The Glass Racking Company has been building Packlifters since the mid 1990's. Our Packlifters have a proven track record of safety and functionality

Features include :

1. All bearing surfaces for the glass on the frame of the Packlifter are clad in a non-marking polymer. The retention arms and feet are all clad in a non-marking plastic. The glass pack never touches a hard, abrasive or marking surface.
2. The design and manufacture of the Packlifter is certified by an independent engineer for the weight of load to be carried
3. The glass pack is retained by arms which hold the top of the pack back against the frame of the Packlifter. Load bearing is on the plastic coated feet of the Packlifter
4. Packlifter sizes are available for 3660 packs and Jumbo 5200 packs
5. The Glass Racking Company Packlifters are provided in a painted finish to a colour of your choice
6. Options are available for a Packlifter designed to be broken down for reducing freight costs, and also with additional safety arms and adjustments. These have been designed specifically for the USA market and are available in the NZ and Australian markets if required
7. Full training guides are provided with each Packlifter, plus video user guides are available online at www.theglassrackingcompany.com in the online training section

PACKLIFTER OPTIONS

The Glass Racking Company Packlifters come in the following sizes :

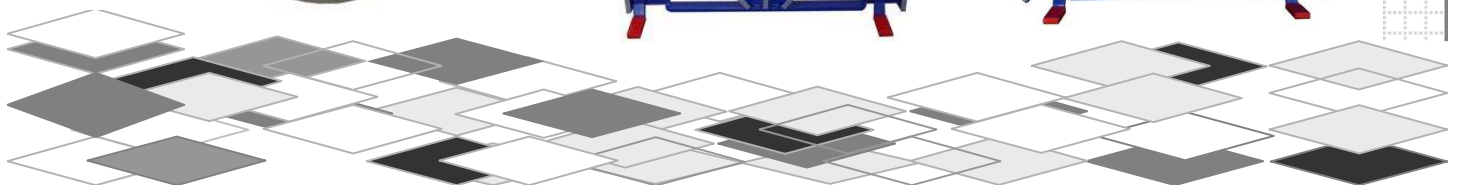

Small – for 1860mm tall packs

Medium – for 2440mm and 2750mm tall packs

Jumbo – for 3200mm tall jumbo packs

Additionally we have developed two Safety Packlifters for the USA market. These are sized for medium and jumbo packs, and have the following additional features :

1. Adjustable feet, allowing the feet to be slid narrower or wider for a variety of resting block configurations
2. Supplied in breakdown form for ease of shipping and assembly
3. Additional structure and bearing surfaces
4. Additional retention arms at the base of the glass load

BENEFITS

Designed and manufactured by a specialist glass factory handling company with 20 years experience

Size options to suit the glass packs to be lifted and moved

Non-marking polymer and plastics on all bearing surfaces

Cleverly designed glass retention arms to safely secure the load, and allow for simple loading and unloading while minimising risk of incorrect or unsafe loading

The design means that while the Packlifter and glass pack is being moved the operator stands/walks behind the Packlifter frame in a safe position

All Packlifters are provided with a written user guide, plus video based user guides are available on-line

Independent engineer certified at design and manufacture for the load to be lifted and moved

Optional Safety Packlifter (USA spec)

Longevity is provided through hard wearing and low maintenance materials

Proven track record in New Zealand and Australia
