

THE GLASS RACKING COMPANY

Innovation by Design

Reveal Foam

Soft foam designed for placing on reveals as separators when transporting window frames. Eliminates hard surfaces rubbing and damaging the window frames. A better solution than carpet.

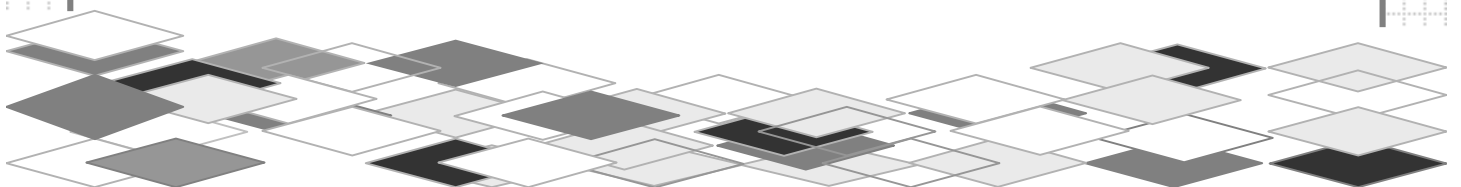

Reveal foam with
a 19mm reveal
inserted

Reveal foam with
a 30mm reveal
inserted

Benefits include less damage to window frames and speeding up the loading and unloading process.

REVEAL FOAM BENEFITS

- ✓ The Glass Racking Company Reveal foam has been developed to address the issues experienced when using carpet spacers between window frames
- ✓ Reveal foam is manufactured from closed cell polyolefin copolymer which has a soft texture to protect the window frames. This texture is particularly important for the softer matt finish powder coatings on some window frames
- ✓ Abrasive road debris does not readily stick to the Reveal foam, further reducing the incidence of scratching and damage to window frames
- ✓ Reveal foams are shaped to clip over the reveal and be held tight by the next window frame, eliminating losses in transit and reducing “settling”. The surface texture of the Reveal foam grips the reveal, and the bearing surface is 20mm thick allowing the Reveal foam to compress under retention and secure the window frames
- ✓ Reveal foams are highly flexible, and recover to their original shape even when bent for long periods. This means that foam breakages are minimal. This is a long life product
- ✓ The Glass Racking Company Reveal foam can be used on 19mm, 25mm and 30mm reveal widths eliminating the need for multiple styles
- ✓ The copolymer has very low water absorption and high UV resistance making it ideal for the uncovered window transportation systems used by most window fabricators
- ✓ The Glass Racking Company Reveal foam is delivered to you in 200mm lengths. The bearing surface for the adjacent window frame is large at 200mm x 55mm
- ✓ Reveal Foam is not a throw away item and should be kept with the delivery vehicle at all times. We suggest a box be incorporated into the vehicle for storing the Reveal foams post unloading
- ✓ Reveal foam is a component of The Glass Racking Company Window Transportation System (see four page brochure)
- ✓ The Glass Racking Company Reveal foam is an NZ made product. The raw material (polyolefin) is NZ made, and the shaping process uses a technology developed in Christchurch.
