GENERAL

The Glass Racking Company supplies cutting and transfer tables, freefalls, and systems for handling glass around the tables. We are not a supplier of automated cutting heads but work with suppliers of that specialist equipment.

MANUAL TABLES

The Glass Racking Company manufactures a very simple entry level fixed cutting table for small workshops or for a supporting role in a larger workshop. As with all our tables it has a quality felt top, is hardwood timber edged, and structurally engineered to withstand freefalling sheets.

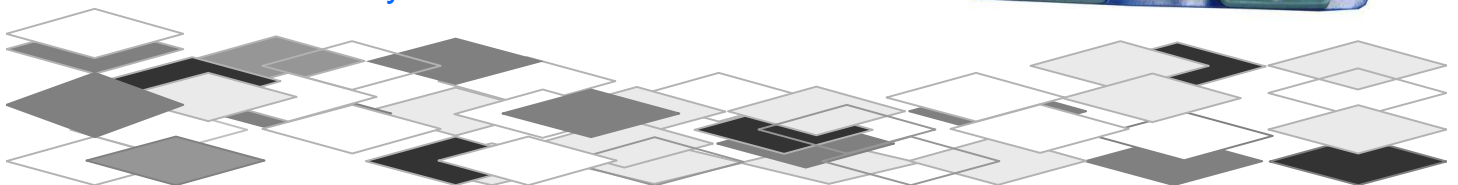

For those customers wanting a low cost tilting table we manufacture a manual tilt table which uses a scissor design to allow a single operator to tilt the table for vertical loading and unloading.

AIR FLOAT TABLES

The Glass Racking Company manufactures our own blower systems for floating glass. These combined with our cavity based table tops provide freefalling and floating options for up to Jumbo sheets of 3/4' flat glass.

Air float controls are provided as either foot controlled, a remote key system, or a full table mounted control system.

The most common sizes for air float tables are :

10" x 7"

13" x 10" and

17" x 11 ½"

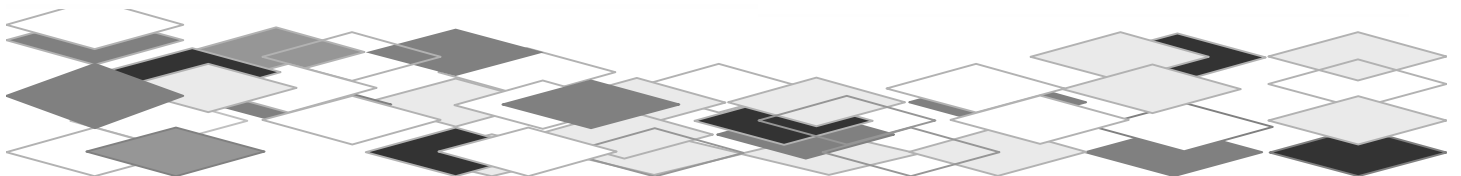

Table dimensions typically relate to the size of stock sheet to be cut and processed on each table.

BREAKER BARS

Breaker bars are an air operated bar system for automatically breaking the cuts made to the glass sheets. The breaker bars are activated by the operator from the tables edge, and speed the process and accuracy of the breakout process.

Breaker bars can be included within the cutting table, or installed in a dedicated breakout table which full sheets of scribed glass are transferred to.

BENEFITS OF OUR CUTTING TABLES

1. The range of tables available is extensive to suit most budgets and needs
2. Requirements outside of our standard offerings can be accommodated with a tailor made solution
3. Our tables are built tough to allow for freefalling
4. More than 18 years experience in building tables for glass factories means that the solutions are tried and proven
5. We manufacture many of the key components specifically for cutting tables rather than using off-the-shelf componentry. This ensures high quality and cost effective tables.
6. The solution provides a professional image for your staff, and to your customers.
