## WHY USE A PACKLIFTER?

The Glass Racking Company Packlifters provide a safe alternative to traditional straps for lifting and moving stoche glass around a factory. Lifting can be via a gantry crane or forktruck. Less glass is broken and staff are safer during the process of lifting and moving packs of glass.

Safety benefits include :

1. The glass is secured against a flat structure so will not flex and shatter when being moved
2. Staff walk behind the Packlifter structure and away from the glass when moving packs
3. Multiple securing points for the glass minimise the likelihood of movement or damage to the glass pack

Efficiency benefit include :

1. Quick to load and unload
2. Manufactured from permanent materials so will not need replacing and little maintenance
3. Can be operated by a single staff member

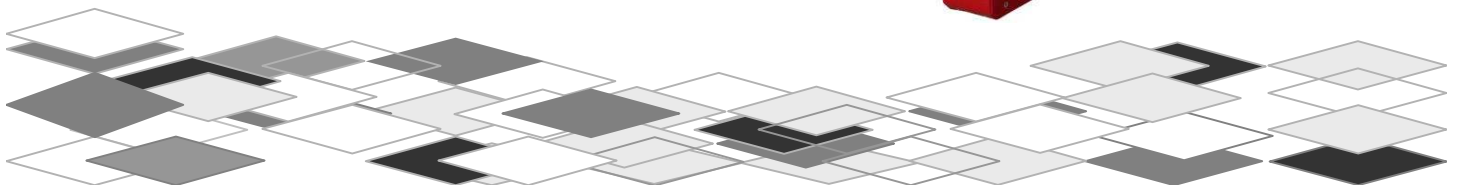

## PACKLIFTER SIZES

Packlifters come in the following sizes :

Medium – for 144” x 98” packs

Jumbo – for 204” x 126” jumbo packs

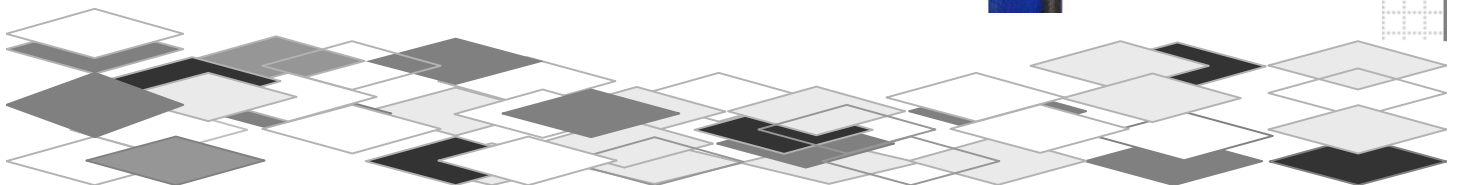

## FEATURES

The Glass Racking Company has been building Packlifters since the mid 1990's. Our Packlifters have a proven track record of safety and functionality

Features include :

1. All bearing surfaces for the glass on the frame of the Packlifter are clad in a non-marking polymer. The retention arms and feet are all clad in a non-marking plastic or rubber foam. The glass pack never touches a hard, abrasive or marking surface.
2. The design and manufacture of the Packlifter is certified by an independent engineer for the weight of load to be carried
3. The glass pack is retained by arms which hold the top and bottom of the pack back against the frame of the Packlifter. Load bearing is on the plastic coated feet of the Packlifter
4. Adjustable feet, allowing the feet to be slid narrower or wider for a variety of resting block configurations. This means that the Packlifter can work with a variety of storage systems in a single factory
5. Packlifter sizes are available for standard and Jumbo stoche glass packs
6. Packlifters are provided in a painted finish to a colour of your choice
7. Supplied in breakdown form for ease of shipping and assembly
8. Full training guides are provided with each Packlifter, plus video user guides are available online at [www.theglassrackingcompany.com](http://www.theglassrackingcompany.com) in the online training section

## **BENEFITS**

**Cost savings through less broken glass**

**Time savings loading and lifting and moving packs of glass**

**Safety improvements for staff**

**Designed and manufactured by a specialist glass factory handling company with 20 years experience**

**Size options to suit the glass packs to be lifted and moved**

**Non-marking polymer and plastics on all bearing surfaces**

**Cleverly designed glass retention arms to safely secure the load, and allow for simple loading and unloading while minimizing risk of incorrect or unsafe loading**

**The design means that while the Packlifter and glass pack is being moved the operator stands/walks behind the Packlifter frame in a safe position**

**All Packlifters are provided with a written user guide, plus video based user guides are available on-line**

**Independent engineer certified at design and manufacture for the load to be lifted and moved**

**Longevity is provided through hard wearing and low maintenance materials**

### **Packlifter**

**Contact us today to discuss your glass and window factory handling needs.**

## **HOW TO PURCHASE**

**Contact your local representative in USA and Canada.**
