SAFETY ARMS FOR FACTORY CARTS

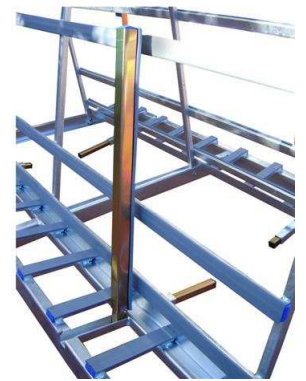

The Glass Racking Company Safety Arms support the glass load when a factory cart is being moved around a factory. This provides security for the product and safety for the users.

SAFETY ARM KEY FEATURES

- ✓ Very simple design.
- ✓ The arm is aligned with the cart to ensure that the supporting face is parallel with the load. The Safety Arm slides in and out with the load volume.
- ✓ The Safety Arm face that holds the load has the same grey non-marking polymer bearing surface as used on the cart supports and ledge.
- ✓ This product was developed in January 2008. All of The Glass Racking Company carts since this date have the base slot for the Safety Arm.
- ✓ The Glass Racking Company carts built before January 2008 can be retrofitted with the Safety Arm and base slot. Other manufacturers carts may be able to be retrofitted and will be assessed on a case by case basis.
- ✓ The Safety Arm is a structually solid product with a gold zinc coating to allow the Safety Arm to be easily seen in the factory, simplifying implementation and management of the factories safety policy.
