FACTORY HANDLING

The Glass Racking Company provides a range of carts for moving glass, IGUs, window frames and sashes around your factory. The range includes a unique Tooth IGU trolley, harps, and A frames with safety arms for securing the load.

Our carts use raised polymer base blocks to keep the window frames and glass away from damaging shavings and debris

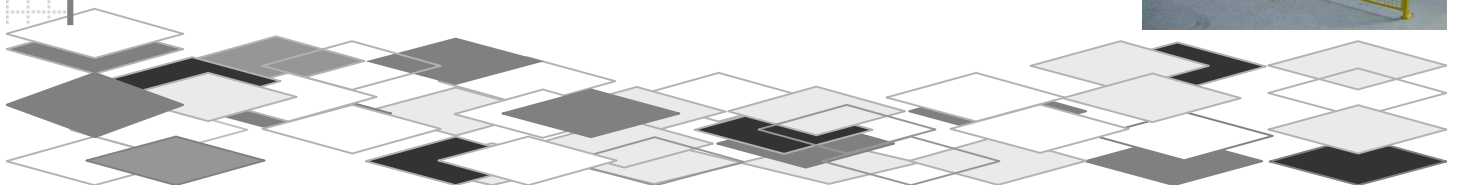

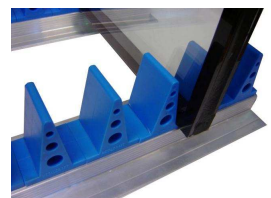

We provide a range of engineer certified site lifting frames so that window frames can be loaded direct from the factory onto the transport frame, transported to site, and lifted into a building

The Glass Racking Company cut length tree cart provides for horizontal storage and movement of long cut lengths. These are also available with four masts for extra long lengths and pack storage.

Light freestanding overhead crane systems are used for loading and unloading, and moving packs up to 2000 Pounds around the factory.

The Glass Racking Company tooth storage system simplifies storage and handling of IGU's and sashes by securely storing them in a toaster format. Variable widths and sizes of IGUs and sashes are accommodated. Available as carts or fixed.

Safety fencing options are available to separate factory areas, and keep factories safe

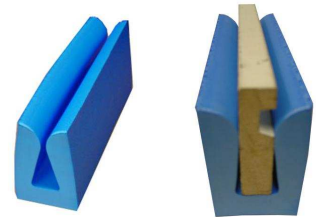

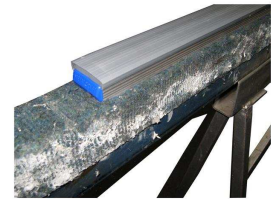

WINDOW MANUFACTURE

The Glass Racking Company provides assembly and glazing tables with non-marking polymer work surfaces to avoid swarf damage to window frames. Optional tilting function to allow semi-vertical loading, unloading and glazing as well as lying flat for fabrication. Access to the window frame from both sides to aid fabrication.

We provide a range of trestles on which to manufacture window frames. All have polymer work surfaces, options for height and length adjustment, and quality castors. These are high quality trestles to assist with health and safety and productivity.

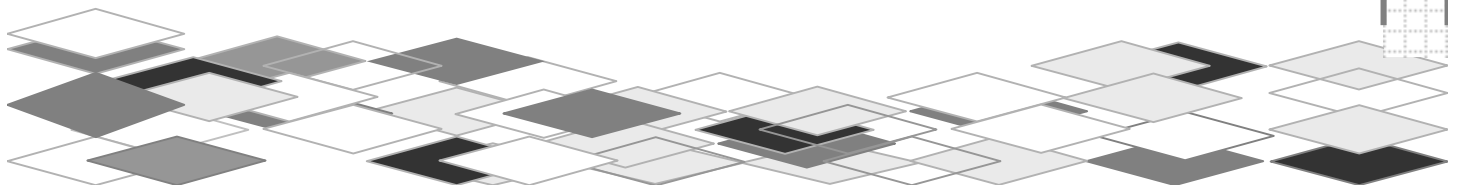

The Glass Racking Company "Trestle Topper" is secured directly onto the top of existing trestles and assembly tables. It provides a non-marking polymer work surface which is free from shavings and reduces damage to window frames during fabrication. Small Joint Sealer and glues can be easily cleaned off providing a flat work surface. Trestle Topper is a far better work surface than traditional carpet.

The Glass Racking Company Reveal foam is designed to stop storage and transport damage to windows. Supplied in 8" lengths and fitting to $\frac{3}{4}$ ", 1" and 1-1/2" reveals.

STORAGE AND DISPLAY

We provide a range of storage systems for Window Fabrication factories, and display systems for showrooms.

MULTI-PURPOSE WINDOW AND GLASS SITE VEHICLES

The Glass Racking Company Glazier (11 ½' body) and Contractor (14' body) provide a lockable workshop, storage for large glass and window frames on the external racks, plus bulk storage of smaller frames on the internal racks. Ideal vehicles for transporting a days work (window frames, glass, and tools) and up to three installers to site.

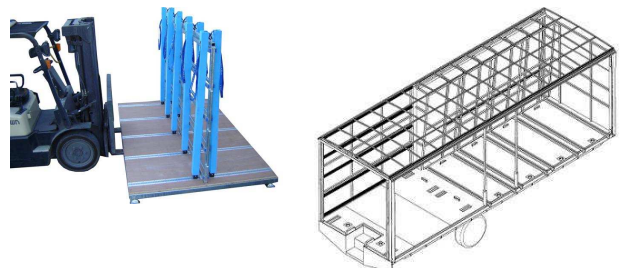

Both vehicles can be fitted with The Glass Racking Company Window Transportation System which provides a pole based retention system to speed load and unload times, reduce transit damage to window frames, and reduce the need for specialist skills to prepare a load for transportation.

ROUTE VEHICLES

The Glass Racking Company window route vehicles use our Window Transportation System. Trucks and trailers with demountable frames are also available, as are vans.
