KEY FEATURES :

- ✓ The racks come in various lengths to allow for configuration specific to your vehicle and needs.
- ✓ Contact points for the windshield are protected with polymers and foam to reduce damage to the windshields. Construction is aluminum for lightweight, long life and durability.
- ✓ The rack easily disassembles into a small flat unit for easy storage.
- ✓ The cams are offset so that they can be rotated to tighten against the windshields to secure them, and loosened for windshield removal.
- ✓ Individual poles can be removed to bulk stack damaged windshields for transportation back to the factory trash bin.
- ✓ The windshields edge sits on polymer covered aluminum raised base blocks to protect the windshield and allow the user access for lifting.
- ✓ The Glass Racking Company windshield rack provides a professional image to your customers as they can see that you are using a purpose built system for storing and securing windshields.
- ✓ The Glass Racking Company windshield rack has been designed in conjunction with glaziers and windshield installers
