

Product Specifications

Open Glass Trucks

Product Summary

Open-deck truck frails for external glass transport, built from lightweight T6 aluminium with secure pole retention and raised base blocks for strong, reliable load support.

Specifications

- External frails designed for open-deck trucks
- Raised base blocks for accurate load positioning
- Slotted base system for adjustable bottom pole location
- Non-marking polymer bearers and blocks for glass protection
- Sprung upper pole location pins for quick securing
- T6 aluminium rack construction with galvanised steel support
- Gusseted top and bottom brackets for added longevity
- Proven long-life, low-maintenance structure
- Designed and fabricated in Australasia

Options

- Single- or double-side external rack configurations
- Optional internal racks for added capacity
- Tray supply or integration with existing factory deck
- Height extensions (five increments up to 500 mm)
- Scissor clamps for extended retention reach
- Custom sizing for specific truck lengths and glass heights
- Storage volume maximisation with internal rack additions

Key Features

Purpose-Built External Frails

Full-length racks sized to truck deck and glass height provide secure exterior load transport.

Strong & Lightweight Construction

T6 aluminium main frame with galvanised steel reinforcement maximises strength-to-weight performance.

Secure Non-Marking Retention

Sliding non-marking blocks and strap poles keep glass stable without surface damage.

Flexible Layout & Capacity Options

Single- or double-sided racks with optional internal racks and tray supply to suit your fleet.
