

Product Specifications

Glazing Rig

Product Summary

The Glazing RIG provides a stable, ergonomic platform for assembling and glazing aluminium or PVC windows and doors. One side is set at a slight lean for efficient window assembly, while the opposite side is vertical for door finishing. Sliding poles lock the extrusions firmly in place, helping maintain squareness and improving the quality and speed of final fit-out. Each RIG is engineered to suit the commercial factory layout, workflow, and production volume. Constructed from welded steel, the system is designed for long-term use in demanding fabrication environments. Adjustable base packers, bolt-on components, and optional building fixings ensure reliable installation even on uneven floors.

Specifications

- Frame construction: welded steel with bolted modules
- Working surfaces: grooved timber or plastic-edged poles to suit extrusion profiles
- Window side angle: approx. 5° lean
- Door side: vertical, fixed plane
- Pole locking: top slide with centre over-cam bottom lock
- Optional floor packers for uneven surfaces
- Optional wall/building fix points for additional rigidity
- Painted finish (standard)

Options

- Custom height and length to suit available floor space
- Additional pole sets pole system
- Factory floor packers for level correction
- Building anchor brackets for structural fastening
- Alternative paint colours or a pre-galvanised finish
- Left-hand/right-hand layout configuration

Key Features

Dual-Sided Working Surface

One angled side for window assembly and one vertical side for door glazing and finishing.

Secure Sliding Pole System

Adjustable poles with over-cam locking keep frames square and stable throughout assembly.

Heavy-Duty Welded Construction

Steel frame with bolted components allows easy transport, installation, and long service life.

Custom-Built to Fit Your Space

Height and length configured to suit factory layout, workflow, and production requirements.
