

Product Specifications

Glass Ute Frails

Product Summary

Lightweight external frailis for utes, built from strong T6 aluminium with secure retention systems to safely transport flat glass sheets and fabricated joinery to site.

Specifications

- Purpose-built frailis for transporting glass on ute exteriors
- Fits factory ute decks or supplied as part of a new tray
- Raised base blocks for defined load support and positioning
- Slotted base for adjustable bottom pole location
- Sprung top pole locating system for secure retention
- Non-marking polymer bearers and sliding blocks
- T6 aluminium extrusions with galvanised steel sub-frame
- Gusseted top and bottom brackets for strength and longevity
- High-carrying capacity with maximised external ledge width
- Suitable for single- or double-sided setups
- Designed and fabricated in Australasia

Options

- Single or double external racks
- A-frame or wellside ute rack configurations
- Height extensions in 5 mm increments up to 500mm
- Scissor clamps for extended pole reach
- Integrated internal rack options
- Choice of retaining systems for different sheet sizes
- Optional new tray supply
- LED lighting upgrades
- Signage and branding opportunities
- Customisable module removal for wheel access

Key Features

Lightweight, High-Strength Design

T6 aluminium construction reduces vehicle weight while maximising load capacity and durability.

Secure, Non-Marking Load Retention

Raised base blocks, slotted bases and sliding polymer blocks protect glass and prevent movement in transit.

Flexible Configurations

Options include single or double external racks, A-frame style or wellside racks to suit vehicle and workflow needs.

Fast Loading & Safe Access

Quick unloading with scissor clamp compatibility and clear deck access for improved handling on site.
